This function is designed to detect the failure of breakers that do not open when a tripping order is sent. The " breaker failure " protection function is activated by an O1 output tripping order received from the overcurrent protection functions (50/51, 50N/51N, 46, 67N, 67). It checks for the disappearance of current during the time interval specified by the time delay T.

Getting electrical signals from point A to point B is pretty standard thing...Put a piece of copper wire between A and B and the job is done. A century of development has left us with increased specialization in wiring, connection devices, and everything in between point A and B. "Mil-Spec" or military specification, has become the buzz-word in motorsport electrical harness construction.

Fig. 1b and c summarizes the melting and crystallization profiles of the conductive filaments containing different percentages of carbon black filler (15.5, 25.9, 32.3% by weight). In all cases, we observe that melting occurred over the range of 130 °C–180 °C while crystallization of the composites occurs over the range of 105 and 130 °C.. Thus, we conclude that our composite filaments are ...
