WIRING THE BOILER. A steam boiler (Figure 5) would have a pressure control as a high-limit control, a low-water cutoff as a safety device, and a thermostat setting the comfort level. There will also be a rollout switch, a flue spill switch, and a flue damper. Any wiring diagrams I show you will be for a standing pilot.

Wire the White wire to one side of the relay coil. Run a Green wire from the other side of the relay coil to C on the transformer, and wire the Green wire in the thermostat cable to C as well. This will provide a constant 24-volt feed to the thermostat electronics no matter what the boiler's limit controls are doing.

Central Heating Control Wiring. Where control wiring is needed from the boiler to a room stat, programmer or motorised valves etc. you can use 3, 4 or 5 core cables as shown in the wiring diagram above and described below. Pump Over-Run. Many boilers now have a pump over-run feature.

**Central Heating Boiler Electrical Wiring Connection ...**

Option 1 involves running a third wire to use as your C (common) from your furnace or boiler to your thermostat. This is applicable for non-T/T furnace or boiler connections. The connections that are needed at the furnace or boiler for this option are R, C, and W. Below is an example of the wiring. Note: The R wire must go into RC instead of RH.
