WIRING. Highly recommend running new wiring for the alternator rather than adapting the existing generator wiring. (Often the insulation on the factory wiring is cracked and frayed, inviting short circuits and other electrical problems down the road.) For wire terminations at components, use crimp-on ring type wire terminals.

Most people mistakenly identify a 3 wire alternator as a one wire alternator (I know, I was one of those). A one wire alternator was only used for limited applications and has distinct disadvantages. The one wire alternator has no voltage sensing lead which means that it can only regulate the +12V (actually +14V) at the alternator.
